

Project Design Phase
Proposed Solution Template

Date	3 October 2026
Team ID	
Project Name	Automated Network Request Management System
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Manual network request processing leads to delayed access provisioning, lack of standardized inputs, high rates of form errors, and poor visibility for tracking approvals and ticket progress across enterprise teams.
2.	Idea / Solution description	An end-to-end automated Service Catalog solution built on ServiceNow. It captures network requests via dynamic forms with Catalog UI Policies (visible/hide of ID field), automatically processes workflow logic in Flow Designer / Workflow Studio, generates mapped records in custom table u_database_tables (DAT... prefix), routes managerial approvals, and dispatches automated email updates (sys_email).
3.	Novelty / Uniqueness	Seamless integration of dynamic client-side UI policies with backend Flow Designer orchestration, enabling real-time auto-number indexing (DAT...) and fully dynamic HTML email rendering with zero manual IT intervention.
4.	Social Impact / Customer Satisfaction	Drastically improves user experience and productivity by reducing request fulfillment times from days to hours, eliminating error-prone manual data re-entry, and delivering full status transparency to employees.
5.	Business Model (Revenue Model)	Internal Enterprise Service Management ROI model: Reduces IT operational support costs, minimizes manual administrative overhead, and optimizes resource allocation across enterprise networks.

6.	Scalability of the Solution	Highly scalable cloud architecture built on the ServiceNow SaaS platform, capable of processing thousands of concurrent network service requests across multi-departmental enterprise teams without performance degradation.
